

GRASS TECHNOLOGY

## Césped® feliz

¡Dale sabor a tu césped!

- ✓ Flores que se pueden cortar
- ✓ Mejora de la biodiversidad
- ✓ Mantenimiento sin esfuerzo
- ✓ Un césped resistente

Presentamos la tecnología Happy Lawn® Grass

GRASS TECHNOLOGY

La tecnología Happy Lawn® Grass le ofrece la oportunidad de tener un impacto positivo en su entorno inmediato. Es una solución revolucionaria que combina flores que se pueden cortar con un césped resistente. Estas flores se pueden cortar una y otra vez, pero siguen regresando, lo que hace que sea más fácil que nunca mantener un césped exuberante y biodiverso.

**Flores que se pueden cortar**

Mowable flowers aren't just a visual delight; they're a remarkable addition to your local environment. When you introduce these vibrant blooms and leguminous plants into your lawn, you're not just decorating your outdoor space; you're fostering a thriving ecosystem.

Mowable flowers and leguminous plants become magnets for pollinators, producing nectar, pollen, and other essential food sources. Bees, butterflies, bumblebees, and a host of other small animals are drawn to this abundant source of sustenance, transforming your lawn into a buzzing, fluttering sanctuary of life.

Incorporating mowable flowers, leguminous plants, and the ecosystem they support is how you truly 'spice up your lawn.' Your outdoor space becomes not just a place of beauty but a dynamic habitat that contributes to the environment.

*"Happy Lawn - testament to nature's resilience!"*

## **Effortless Maintenance**

Our mowable flowers aren't just easy on the eyes; they're easy on your schedule too. Unlike traditional lawns or public green spaces that demand frequent mowing and fertilization, the flowers in Happy Lawn are the epitome of low-maintenance elegance. They flourish with minimal water and nutrients, allowing you to 'spice up your lawn' while saving both time and effort.

## **A Resilient Lawn**

Enter Resilient Blue® Grass Technology, the cornerstone of Happy Lawn's resilience. Specially developed resilient Kentucky bluegrass (resilient smooth-stalked meadow grass) plants form the foundation of this innovative approach. With Resilient Blue, our turf not only endures extreme conditions like drought and heat with grace but also bounces back quickly after such challenges. Resilient Blue technology and Happy Lawn technology work hand in hand, reinforcing each other to give you a lawn that's not just colorful and beautiful but also durable and long-lasting.

When you choose Happy Lawn, you invest in a lawn that's more than just a pretty face; it's a testament to nature's resilience. You're choosing a vibrant outdoor space that will bring you joy for years to come.

## Specifications

NAME	VALUE
Speed of establishment	slow
Nitrogen requirement	very low
Speed of Growth	Slow
Sowing rate per 100m <sup>2</sup>	2-3kg
Sowing rate per m <sup>2</sup>	20-30g
Mowing height	40mm
Packaging	0.5kg
Sowing depth	5-10mm

## Characteristics

★★★★☆ Higher wear tolerance	★★★★★ Higher drought tolerance
★★☆☆☆ Quicker establishment	★★★★☆ Suitable for shade
★★★★☆☆ Finer leafed	★★★★★ Less maintenance possible
★★★★★ Less fertilizer required	★★★★★ Higher disease tolerance
★★★★★ Self repairing	★★☆☆☆ Germination at low temperature
★★★★☆☆ Quicker germination	★★★★★ Higher winter hardiness
★★★★☆☆ Early spring growth
